

STRUCTURAL ENGINEER

Emily Sackman
Coffman Engineers

Emily Sackmann loved being creative in high school. When her teachers and family suggested she consider studying engineering, she was skeptical. Today, she works with Coffman Engineers to solve structural problems within the constraints of codes and client needs. She found out that her creative problem solving is the key to success in any STEM profession.

FUN FACT: In addition to taking concrete and steel classes, Sackmann minored in Jazz Piano during undergrad.

“Even if you feel like you’re feeling like your failing at something keep going. Find the resources you need and try to put things in context of your whole class or your whole education and what is most important at this time.”
