Jenee Myers Twitchell grew up in Yakima and was the first person in her family to go to college. When she got to UW she and a few of her peers created a curriculum to solve problems around inequities in the education system. Today, that curriculum is known as the Dream Project. At Washington STEM she uses the data analysis skills she learned working in the Dream Project to track the progression of Washington STEM's initiatives.

PROTIP: “If you see a problem, chances are you can fix it. You just need to ask everyone around you how to do it and that can lead to your career.”
