

# MANAGEMENT CONSULTANT

Tsewone Melaku  
Accenture

When Tsewone heard about Human Centered Design & Engineering from a Boeing engineer speaking at a UW Making Connections event, she was hooked. She immediately switched her major from pre-Business to Human Center Design & Engineering. Tsewone has now begun her STEM career as a Management Consultant at Accenture.

**FUN FACT:** In addition to her studies, Tsewone is the Region VI Pre-College Initiative Chair of the National Society of Black Engineers, an organization whose mission is “to increase the number of culturally responsible Black engineers who excel academically, succeed professionally, and positively impact the community.”

*“In Human Centered Design & Engineering, you’re the voice at the table that represents the user when we are creating things. I value being able to speak up for others because I think it’s important for everyone to have a voice.”*
