

# WATER ENGINEER

**Kimberly Lawrence  
Jacobs**

*"Be yourself. Remember who you are and what your values are. Keep going, keep working, and keep pushing yourself in STEM. You're capable of more than you know!"*

Kimberly focuses on projects that provide clean drinking water for communities across the Puget Sound, wastewater projects that are designed to reduce environmental impact, as well as applying her expertise towards earthquake preparedness for the Puget Sound's water supply. Kimberly is originally from Dominica, a small island in the Caribbean, and says the natural beauty of the island is what gave her the inspiration to pursue STEM.

**FUN FACT:** STEM has taken Kimberly across the globe! As of February 2020, Kimberly has visited five out of the seven continents and has plans to travel to Antarctica by the end of the year!
